## Programming Expertise

### Project: GC Flash                             September 2021 - March 2022

- Built a video-conferencing application with basic functionalities such as group messaging and group video calling using Angular with 6 other student developers to provide a completely free alternative to Google Meet and Zoom for our school.
- Served as the project's primary front-end developer and coordinated with the other three front-end developers to create an application that shared a design language with the school's recently established classroom management tool.

### Project: Go-cery                                          June 2021

- Developed a basic e-commerce application using Angular for selling groceries that allows you to examine the products, add them to a cart, and enter your delivery details.
- Worked on the project as the primary front-end developer for a group of three student developers, utilizing pure CSS for the design and practicing acquired information with responsive web design.

## Skills

| | |
|---|---|
| **Technology** | (HTML,CSS,JavaScript,Angular,PHP,MySQL,Git) |
| **Tools** | (GitHub,VSCode,Figma,Canva,Slack,Zoom,XAMPP) |
| **Languages** | (English (fluent), Tagalog (native)) |

## Education

🎓 **Senior High School**
Information Communications Technology | Gordon College | 2016 - 2018

🎓 **College**
Bachelor of Science in Information Technology | Gordon College | 2018 - 2022

## Experience

**Web Developer Intern,** iFormatLogic IT Solutions, Feb 16 2022 - May 18 2022

- Created landing pages with HTML, CSS, Vanilla JS, and Bootstrap 5. Coordinated with supervisors for continuous design improvement leading to learning more good practice with UI design.
- Used Avocode, Adobe Photoshop and WinSCP for extracting assets out of Photoshop designs and deploying created landing pages
- Made basic CRUD applications with plain PHP and vanilla JavaScript for a good and solid understanding of the operations before working with Laravel.
- Recreated landing pages made with HTML and CSS to a website made with Wordpress (Elementor) and Webflow to immerse myself and better understand how other developers in the company make websites faster and easier with other tools
